Life-Prints Child Safety Software was designed with guidance from police departments, prominent child advocacy agencies, and missing person's departments. It provides parents an easy to use, yet sophisticated system to maintain critical information securely on their home computer and/or portable memory devices and is coupled with an emergency alert system that can instantly transmit emergency information to authorities in an emergency. By using a keychain flash drive Life-Prints allows parents to carry critical emergency information while traveling. Life-Prints is the only child identification product based on law enforcement compatible Electronic Fingerprint Technology (EFT). And the the only system with a national emergency transmit function..
